Summary

Data Engineer with experience building ETL pipelines, data models, and analytics infrastructure for a SaaS platform serving over 1,000 customers, 2,000+ branches, and more than 300,000 vehicle records. Skilled in SQL, Python, Apache Airflow, BigQuery, and data warehousing, with experience designing scalable data solutions that support business intelligence, operational reporting, and stakeholder decision-making.

Technical Skills

Data Engineering: ETL Pipelines, Apache Airflow, Data Warehousing, Data Modeling, BigQuery, PostgreSQL, Data Migration
Languages: SQL, Python, JavaScript
Analytics & BI: Tableau, Tableau Prep, Zoho Analytics, Zoho CRM, Forecasting, KPI Reporting
Python Libraries: pandas, NumPy, scikit-learn, PyTorch
Tools: Git, Jupyter, UNIX, Agile/Scrum

Experience

Data Analyst / Data Engineer Aug 2024 – Present
Karage

- Designed and developed ETL pipelines using Apache Airflow to automate data ingestion, transformation, and reporting workflows across CRM, finance, and operational systems.
- Developed data models and contributed to the implementation of a centralized data warehouse in BigQuery to support scalable analytics and cross-functional reporting.
- Designed reporting infrastructure integrating CRM, finance, and production database data for a SaaS platform serving 1,000+ customers and 2,000+ branches, enabling a unified view of business performance.
- Led the migration of business-critical data from a legacy platform to a new system architecture, ensuring data integrity and minimizing operational disruption.
- Implemented centralized reporting solutions consolidating multiple business systems, reducing report generation time by 60%.
- Partnered with finance, sales, and customer success teams to translate business requirements into scalable datasets, reporting structures, and analytical models.
- Built reporting solutions and KPI frameworks enabling leadership teams to monitor operational performance, customer activity, and business growth across 2,000+ branches.
- Worked with operational and customer activity data covering more than 300,000 vehicle records to support analytics, reporting, and business performance monitoring.

Software Developer May 2024 – Oct 2024
Senang.io Contract, Remote

- Developed backend services and APIs using FastAPI to support ML workflows processing over 10,000 images.
- Built scalable REST APIs and optimized application performance through asynchronous processing and caching mechanisms.
- Developed responsive frontend solutions and integrated user workflows for insurance technology products.

Undergraduate Research Assistant Jun 2023 – Feb 2024
Monash University

- Conducted research on Neural Radiance Fields using **PyTorch**, achieving a 15% improvement in 3D reconstruction accuracy for limited-view scenarios.
- Worked with experimental data, model outputs, and performance metrics to evaluate reconstruction quality and compare research results.

Projects

Enterprise Data Warehouse Initiative | BigQuery, Airflow, SQL, Data Modeling 2025 – Present

- Designed dimensional data models and warehouse architecture to consolidate CRM, finance, and operational platform data into a centralized analytics environment.
- Contributed to the implementation of a BigQuery-based warehouse environment to support scalable reporting, business intelligence, and cross-functional analytics.
- Worked on data integration planning for combining CRM and production database data into a unified reporting layer.

Credit Risk Analytics Platform | Python, LightGBM, scikit-learn Jan – Feb 2024

- Built an end-to-end machine learning pipeline processing 577,000 loan records, including data preparation, feature engineering, model training, and evaluation workflows.
- Performed data cleaning, exploratory analysis, and feature preparation to identify key borrower and loan attributes associated with credit risk.

Customer Churn Predictor | Python, XGBoost, Bayesian Optimization Jan – Feb 2024

- Designed a reproducible machine learning workflow for customer churn prediction using automated feature selection and Bayesian hyperparameter optimization.
- Applied statistical feature selection and model tuning to improve prediction quality and identify customer attributes linked to churn risk.

Education

Monash University Oct 2020 – Dec 2023

Bachelor of Computer Science, Major in Data Science
